**Ben Towne Center for Childhood Cancer Research, Seattle Children's Research Institute: 3:30 pm – 4:30 pm**

*Walking distance from the Seattle Children's Research Institute*

Learn how we are training a child's own immune system to fight cancer. Our goal is that someday childhood cancer will be treated no differently than an everyday virus – and that chemotherapy and radiation will become treatments of the past. Your visit will include a presentation by the center's Director, [Dr. Mike Jensen](#), including the latest about the promising results from our clinical trials supported by the [Strong Against Cancer](#) initiative, and a lab tour.

**[Seattle Children's Hospital](#) Tour: 3:45 pm – 5:15 pm**

*Main hospital campus in Laurelhurst neighborhood of Seattle; transportation from Jack MacDonald Building to be provided. Please note: traffic may affect the timing of the tour.*

Right now, a worried mom or dad is on the way to Seattle Children's with their child. Can we give them hope? Can we provide care? Do we have a cure? We see a day when we can say yes to hope, care and cure every time, for every child. We invite CAC2 summit attendees to join us for a special tour to learn more about our bold vision: to transform childhood health. Hear from [Dr. Todd Cooper](#) about how our new [High-Risk Leukemia Program](#) is leading the way in providing seamless care, using state-of-the-art diagnostics, and matching kids with therapies that target their particular cancer. Visit [the lab](#) to hear about how advanced genetic sequencing supports this sort of personalized medicine from Amy Henriques, Manager of Lab Safety and Quality. You'll also see our in-patient cancer unit, and tour the playroom with Child Life Specialist fellow for the Cancer Care Unit, LuzAndrea Guerrero.
